Deme configuration

deme	division	country	region	exclude_country	min_date	max_date
China		China	Asia		2019-12-24	2020-01-23
France		France	Europe		2020-01-23	2020-03-08
Germany		Germany	Europe		2020-01-28	2020-03-08
Italy		Italy	Europe		2020-01-29	2020-03-08
OtherEuropean			Europe	France,Germany,Italy,Spain	2020-01-29	2020-03-08
Spain		Spain	Europe		2020-02-24	2020-03-08

Table 2: Total number of cases reported to ECDC
18th March

deme	cumcases	pop	cas100
China	81063	1439323.8	5.6
France	6633	65273.5	10.2
Germany	6012	83783.9	7.2
Italy	27980	60461.8	46.3
OtherEuropean	16685	491362.0	3.4
Spain	13994	46754.8	29.9

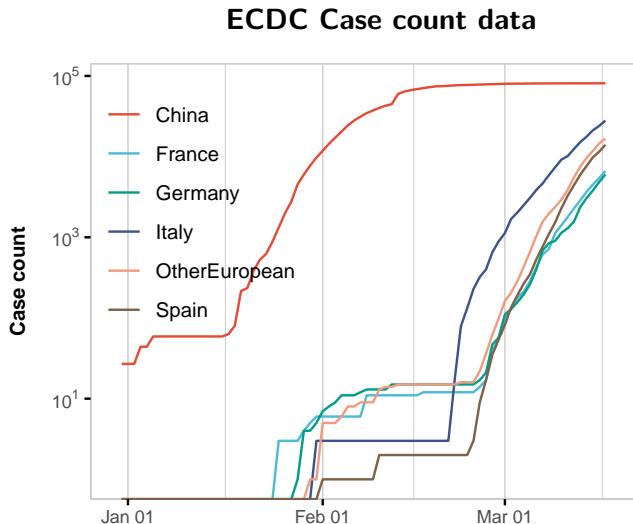

Figure 1: ECDC case counts for each deme from the beginning of the pandemic to March 18

Epidemic trajectory data

From the Stochastic Trajectory Mapping analysis, we obtain one epidemic trajectory per set of parameters + typed node tree.

The processing of the trajectory data includes the generation of two different datasets:

- **states:** We have the total number of inferred cases by trajectory, deme and time.
- **events:** We have each event that happened in a epidemic trajectory, with its type (origin, birth, death or migration), the source/destination deme and time.

Table 3: States dataset

traj	type	time	N	age	date_model	date
1	France	0.0000000	0	0.3081309	2019-11-15	2019-11-25
1	France	0.0061626	0	0.3019683	2019-11-17	2019-11-27
1	France	0.0095228	0	0.2986080	2019-11-18	2019-11-28
1	France	0.0187668	0	0.2893641	2019-11-22	2019-12-02
1	France	0.0241403	0	0.2839906	2019-11-24	2019-12-04

Epidemic trajectory data

Table 4: Events dataset

traj	time	event	src	dest	mult	age	date_model	date
1	0.0000000	O				0.3081309	2019-11-15	2019-11-25
1	0.0061626	B	China	China	1	0.3019683	2019-11-17	2019-11-27
1	0.0095228	B	China	China	1	0.2986080	2019-11-18	2019-11-28
1	0.0187668	B	China	China	1	0.2893641	2019-11-22	2019-12-02
1	0.0241403	B	China	China	1	0.2839906	2019-11-24	2019-12-04

To have a feasible time of analysis of the epidemic trajectories we take a random subsample of 500 trajectories.

To facilitate visualization and summarise the results, we take a grid time of 1 day and summarise the number of events that day as the sum of the events in the corresponding time interval; and the number of inferred cases as the maximum of the interval.

Inferred case counts - China
